Disclaimer

We make considerable effort to make this directory complete and accurate. However, if you find anything inaccurate or feel there is a listing or category we should include please let us know and we will consider it for future revisions.

Businesses must be registered in order to be listed (this is a condition of many grant programs, including ours).

Nottawasaga Valley Conservation Authority (NVCA) does not endorse or recommend any of the services or contractors listed in this directory. It is provided for your convenience to simplify finding the appropriate group or business.

As the person purchasing the service, use due diligence retaining a contractor. Use a licensed contractor if required by the project (e.g. well and septic work).

Permits: Please note when working around lakes, ponds, streams, wetlands and other waterways that permits are likely required. Call first to discuss your project with an NVCA environmental officer. You may not require a permit, but checking first can save potential delays, harm to fish and the environment, fines, remediation costs and/or imprisonment. If the project is considered eligible under the NVCA's Healthy Waters Grant Incentive program and requires a permit from the NVCA, we will waive our permit fee.

This publication, first printed in 2008, was made possible in part by support from the Ontario Ministry of the Environment (now Ministry of Environment, Conservation and Parks). Such support does not indicate endorsement by the Ministry of the contents of the material.

Alternative Versions: If you require this information in an alternative format, please contact NVCA at 705-424-1479 or admin@nvca.on.ca

Welcome Watershed Stewards!

The Nottawasaga Valley Conservation Authority (NVCA) hopes you will find this directory useful in your efforts to protect and improve the lands and waters of your watershed.

Enclosed is a listing of environmental organizations, government departments, services and consultants that may help you with your environmental projects.

Watershed Stewardship

means acting to protect and maintain the
high ecological functions that provide us with the
clean, healthy air, water, and land we all need to live.

Watershed Stewards

protect ecosystems and the plants, fish, wildlife
and people that depend on them.

Now and for years to come.

Want to learn more about Stewardship?

In addition to this guide, NVCA provides technical advice and various funding grants aimed at improving water quality and increasing forest cover. If you have a project you are considering, please give us a call at 705-424-1479 or email admin@nvca.on.ca.

About the Nottawasaga Valley Conservation Authority

The Nottawasaga Valley Conservation Authority (NVCA) is a public agency dedicated to the preservation of a healthy environment. Our mission is to work together to lead, promote, support and inspire innovative watershed management.

The watershed covers a large area of 3,700 sq. km, with jurisdiction in 18 municipalities in the counties of Simcoe (74%), Dufferin (22%), and Grey (4%).

The watershed is bounded to the south by the Humber and Credit River watersheds. The Niagara Escarpment forms part of the western boundary, separating the Nottawasaga from the Grand and Saugeen watersheds. On the east, the Nottawasaga Watershed is bounded by the numerous streams which drain into Lake Simcoe. The northern boundary of the conservation authority's jurisdiction is Nottawasaga Bay.

The main Nottawasaga River is 122 km long and has a drainage area of 3,361 sq. km. The main source of the Nottawasaga River is in the glacial Oak Ridges Moraine, within Amaranth Township, and begins from an elevation of almost 490 m. The Nottawasaga River drops 310 m to its outlet into Georgian Bay and has an average gradient of 2.6 m per km. However, in the upper reaches of the river, the gradient is as much as 19 m per km (at its outlet in Georgian Bay). See the map that follows.

The Nottawasaga River has 6 primary tributaries; the Boyne River, the Mad River, the Pine River, Innisfil Creek, Bear Creek, and Willow Creek. In addition to the Nottawasaga's major drainage basin, four streams near Collingwood (the Pretty River, Batteaux River, Silver Creek and Black Ash Creek) drain directly into Georgian Bay from the Niagara Escarpment are also in NVCA's jurisdiction.

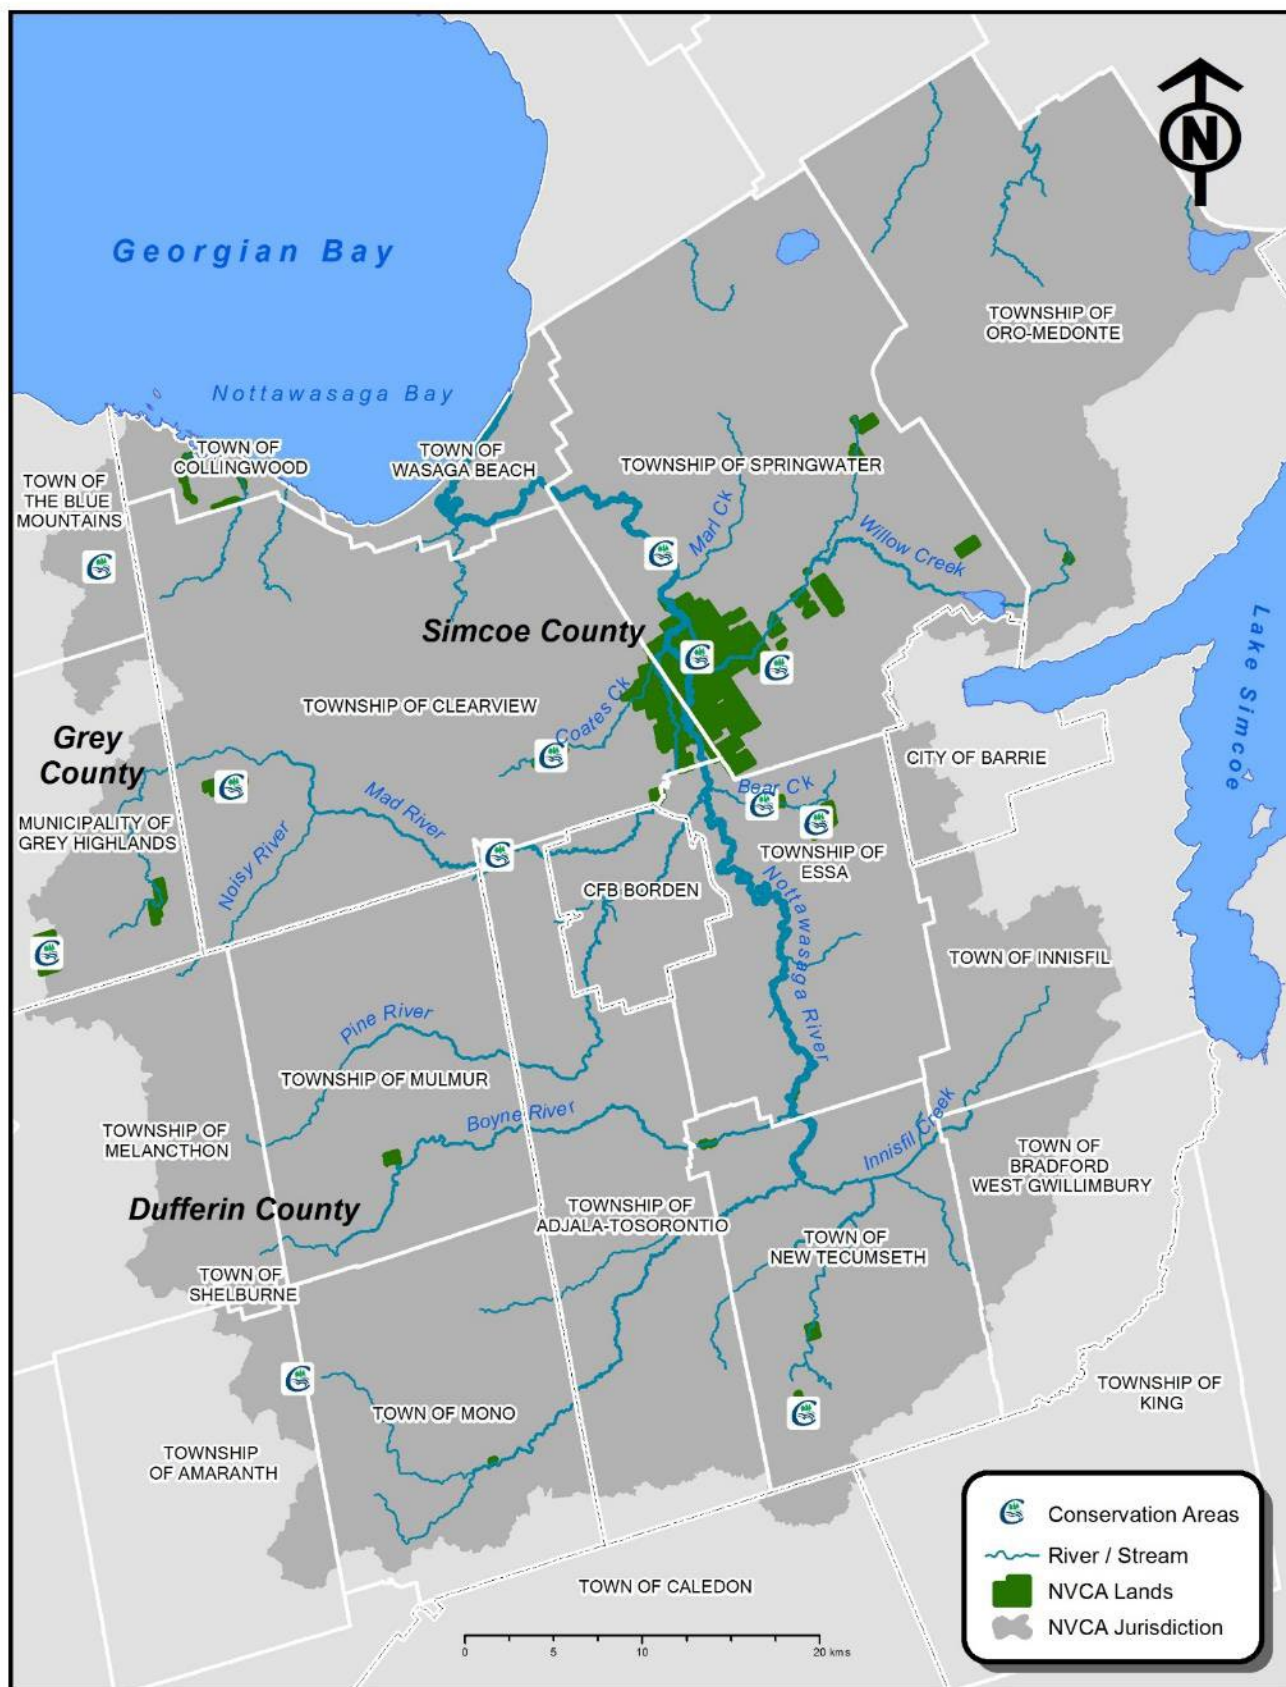

An unusual characteristic of the Nottawasaga Valley watersheds are their virtual lack of natural lakes. In fact, Little Lake, which has an area of 235 ha, is the largest lake in the watershed. The Nottawasaga Valley exhibits a diversity of landscapes, ranging from the vertical cliffs of the Niagara Escarpment, to the rolling topography of the numerous moraines and the broad flats of the Simcoe Lowlands.

Governance - The authority is governed by a board of 18 members – one representing each of the municipalities in the watershed.

Service Areas – The authority staff operate in three key service areas:

- **Office of the CAO & Corporate Services:** administration, communications, finance, governance, human resources, and information management (GIS and information technology)
- **Land, Education & Stewardship Services:** conservation areas and protected lands, environmental education, forestry, and stewardship
- **Watershed Management Services:** engineering, flood program, groundwater program, source water protection, watershed monitoring, regulations and enforcement, and planning

For information on any of these services, visit the authority's website at nvca.on.ca.

Map: NVCA's jurisdiction and watershed boundaries.

NVCA does not endorse or recommend the services or contractors listed. It is provided for your convenience, to simplify finding the appropriate group or business. Use a licensed contractor and due diligence if retaining a contractor.

Conservation Areas

Discover Our Natural Wonders, Wonderfully Nearby!

Most of the NVCA's 11,000 acres are considered wilderness or natural lands. We welcome an ever-growing number of visitors to enjoy our attractions and recreational opportunities. See the historical Fort Willow, hike along the cliffs at Nottawasaga Bluffs, or pack a lunch and paddle for hours in the Minesing Wetlands.

Our conservation areas provide a wide variety of recreational opportunities including: nature trails, bicycling, bird & butterfly watching, canoeing, camping, fishing, hiking, hunting, photography, cross-country skiing, and more!

- **Conservation Area Annual Parking Passes:**

Passes are valid for a calendar year. They can be bought in person at the Tiffin Centre, via mail by submitting a land pass form, or via your smart phone at a conservation area parking lot. The pass costs \$45.50 per vehicle.

- **Daily Parking Fee:**

Without a pass, the admission fee to NVCA conservation areas is \$6.50 per vehicle, per day. Passes can be purchased with your smart phone at the conservation area parking lot.

Note that prices are subject to change.

Check out www.nvca.on.ca for more information on visiting NVCA's conservation areas.

Environmental Organizations

Conservation Authorities

Conservation Authorities (CAs) are public agencies dedicated to the preservation of a healthy environment through specialized programs to protect, conserve and enhance our water, wetlands, forests, and lands.

Since their beginnings over 50 years ago, Ontario's 36 CAs have worked in partnership with all levels of government, other agencies and landowners to ensure the proper management of our water and land resources. They provide technical advice and deliver services and/or programs to watershed residents.

Now more than ever before, it is important for CAs to continue this important work in order to ensure we have safe and sustainable water sources today and for future generations.

Land Trusts and Information

Want to leave a living legacy?

If you have ecologically important lands you'd like to protect forever, consider donating them. Land trusts and your local conservation authority can often accept and care for land donations.

Eligible donations receipts can be applied over ten years to maximize income tax benefit.

Ecogifts: A Wild Gift Idea

Since 1995, Environment and Climate Change Canada's Ecological Gifts Program has enabled individual and corporate landowners to protect their cherished pieces of nature forever by donating ecologically sensitive lands to environmental charities or government bodies.

An "ecogift" can be:

- a donation of land
- conservation easement
- covenant or servitude

In addition to the peace of mind of knowing that the land will be managed by the recipient according to mutually agreed-upon conservation goals and objectives, donors are also eligible to receive attractive income tax benefits for their donations:

- The tax credit is calculated by applying a rate of 15 per cent to the first \$200 of the donor's total gifts for the year and 29 per cent to the balance.
- In most provinces, a reduction in federal tax will also reduce provincial tax.
- Ecogifts have a 0% capital gains inclusion taxation rate.
- These donations have a special 10-year carry-forward claiming period.

Conservation-minded Canadian landowners are taking part in the Ecological Gifts Program each year. From 1995-2011, 902 ecological gifts have protected 140,500 hectares of wildlife habitat.

Conservation Clubs and Trail Associations

Part of the fun of protecting the environment is getting to get out and enjoy it! Conservation groups and hiking clubs are great ways to meet people and explore.

By hiking you can get up close to nature or see the valley from a bird's eye view. Getting out into natural environments is a great way to get exercise but also get a better understanding of the ecosystems around you.

For **Simcoe County Trails**, visit simcoe.ca and search for "Trails"

Non Governmental Organizations (NGOs)

One of the pillars of sustainable development and conservation is for citizens to get involved at a local level. It's a great way for community members to get involved with local social and environmental issues.

NGOs are ultimately maintained by the communities themselves. Look for an NGO near you and get involved with local issues at the grassroots level.

Agriculture

The Environmental Farm Plan (EFP) is a great way to assess your risk and provides up financial assistance for installing improved Best Management Practices. The EFP funds projects such as enhancing fuel and chemical storage, installing equipment such as anti-backflow valves, and improving pest management to reduce the amount of chemicals used. (see ontariosoilcrop.org for more details).

NVCA's Healthy Waters Program also has grants that can be used for eligible projects. Contact us for details: nvca.on.ca

Erosion Control

There are many reasons to protect water from runoff and erosion.

Keep sediment and excess nutrients out of our water supplies protect our health. Having clean, healthy sources of drinking water also saves us from having to treat contaminated water to make it safe for drinking and to help from having to find new sources of clean, healthy water when old ones are polluted.

It also helps protect the health and value of land and water features, and helps agricultural operators protect the health of their livestock and livelihood.

Soil Erosion Control Contractors Certificate Holders

Holders of the Soil Erosion Control Contractors Certificate of Achievement have attended formal training in "Agricultural Erosion Control Structures Training Course" developed and delivered by the Ontario Ministry of Agriculture, Food and Rural Affairs (OMAFRA), and have passed an exam that tests their minimum skill and knowledge in the area of design and installation of soil erosion control structures.

To locate a contractor:

omafra.gov.on.ca

Cover Crops

There are great benefits to using multi-species cover crops:

- Reduce erosion
- Add Organic Matter
- Soil structure
- Reduce Nutrient Loss
- Fix and Scavenge Nitrogen
- Reduce compaction
- Control pests

Work to improve your organic matter with cover crops and manure, otherwise with continued cropping organic matter will decline.

- Check out a video of the [multi-species cover-crop demonstration site](#) at this field in Innisfil, Ontario.
- **Find Your Right Mix:** Ontario Farmers can use [The Cover-crop Selector Tool](#) to find the mix of species right for their production system.
- OMFRA maintains a listing of [Ontario Cover Crop Seed Suppliers](#).

Tile Drainage Box Manufacturers (Control Structures)

Tile Drainage Control Boxes: Open fully in early spring, add panels after seeding and reap the benefits. (Credit: Ontario Ministry of Agriculture, Food & Rural Affairs © Queen's Printer for Ontario, 2011 Used with permission.)

Benefits of Installing Tile Drainage Control Boxes

- **Increase Yield:** Installing tile drainage control boxes helps reduce crop-field nutrient losses. An Ontario study with a five-year corn and three-year soybean rotation found an average annual benefit of \$55/ha for corn and \$21/ha for soybeans compared to uncontrolled drainage.
- **Reduce Water Pollution:** They reduce tile drain pollution into streams during the growing season:
 - phosphorus (63%)
 - ammonium (57%)
 - nitrate (65%)
- **Conserve Water:** They help conserve precious summer precipitation for crop usage. (Source: Agriculture and Agri-Food Canada, 2010)

Livestock Fencing

Keep livestock out of ponds, rivers and streams and other sensitive areas such as wetlands. This protects the natural areas such as wetlands. And helps keeps your herd productive and healthy (drier feet, cleaner water).

For information on local funding programs to assist you with fencing and other projects, contact your local conservation authority.

Eavestroughing

Protect water by keeping it clean in the first place!

Eavestroughing your barn is a simple renovation that helps protect both surface and groundwater quality. Make sure to pipe it away from areas with manure.

In areas with livestock, rain water carries bacteria from animals directly into waterways and groundwater.

You can even capture water in a cistern for use. This will decrease stress on the water table.

Culverts & Stream Crossings

Permit/s Required.

Stream crossings can impact fish migration and flow. Taking care to design your crossing for regional storm flow, ice and stability to reduce the chance you'll flood your property or your neighbours. Contact your CA to find out what is required for the permit.

Typically, spanning crossings require engineered stamped drawings to be submitted (see engineer sections).

Manure: A Valuable Farm Resource

Take advantage of the nutrients generated on your farm! Careful storage, planning and application of manure can increase yield, and soil productivity, while minimizing runoff to local creeks, lakes, wetlands and groundwater.

The Nutrient Management Act was designed to reduce the potential for contamination of water and other natural resources by some agricultural practices. The Act requires that Ontario's farm practices use nutrients wisely so that nutrients such as nitrogen, phosphorus and potassium can provide economic benefit with minimal impact on the environment.

What's in a Name?

Nutrient Management Strategy: details the storage and destination of all the manure generated on the property.

Nutrient Management Plan: details how manure is to be applied to the landscape.

Nutrient Management – Do It Yourself

Want to learn how to prepare your own Strategy or Plan?

Learn about the courses you need to get a Nutrient Management Certificate or License at nutrientmanagement.ca/, or contact the **Ridgetown Campus of the University of Guelph:**

Manure Storages

Well-constructed manure storages can help retain nutrients and organic matter for use as fertilizer.

Impermeable, covered storages reduce the most runoff of bacteria, nutrients and organic matter to streams, lakes and wetlands.

Additionally, they help protect groundwater from bacteria and nitrates.

**Spills Action Hotline -
Ministry of Environment, Conservation
and Parks**

The Spills Action Centre operates 24-hours a day and can be reached province-wide and toll-free:

1-800-268-6060

Environmental officers who receive the calls at the Spills Action Centre can provide advice and information related to spills or drinking water events. They can also activate a field response when needed or initiate service continuity arrangements.

The Spills Action Centre receives a wide range of notifications including:

- reports of spills & other environmental discharges

- adverse drinking water results
- disruptions to time-critical MOECP services

Pesticide & Chemical Storage

Preventing a spill is much less expensive and difficult than cleaning it up afterwards.

These three guiding principles can help you protect our environment:

- **Reduce:** use/store the least amount of fertilizers, gas, oils and pesticides your operation needs to minimize risk of spills, fire hazard, storage space requirements and disposal costs.
- **Proper Storage:** Use double containment, protect from weather and fire and inspect regularly. Don't store non-compatibles together.
- **Dispose:** Proper and regular disposal of any waste material at authorized Hazardous Waste Depots.

Tip: If you are storing quantities of fuel or chemicals on your property, obtain sufficient insurance to cover clean-up and potential liability.

Fuel Storage

A single liter of oil or gas can contaminate a million liters of drinking water! Protect your water, and limit your liability by adding secondary containment, such as a double-lined, vacuum-gauged tank.

Canadian Heating Oil Association

The Canadian Oil Heat Association is a professional organization that provides additional training a certification.

1-800-257-1593 – oilheat@coha.ca

GreenTECH certified contractors have a minimum of 3 years of relevant field experience, commit to continuing education, have passed specified courses designed to test competence in the required skill areas.

Spills & Leaks: Heating Oil

In Canada, hundreds of spills of heating oil are reported annually. These can be harmful to human health, the environment and costly to clean-up. Prevention is far preferable. If you have a spill, it's critical to act quickly to clean it up – for health, environmental, and financial reasons!

According to the Insurance Bureau of Canada heating oil spills are from the following sources:

- 45% Corrosion
 - 28% outside tanks
 - 17% inside tanks
- 29% Piping
 - 19% outside
 - 10% inside
- 11% Overfill
- 5% New installation
- 10% Other

You can see indoor systems have fewer spills. And generally, these are detected earlier.

New tanks that are corrosion proof or resistant are now available. Such as double lined polymer and fiberglass tanks, or double bottomed steel tanks.

Use only certified installers and maintenance professionals.

Oil Burner Technicians

If you heat with oil, there is the potential for leaks and spills. Don't wait for this to happen: Be Proactive. It's smart, will protect you and your family, the environment, and may even reduce your insurance costs.

Reduce your risk with:

- indoor installation
- annual inspection
- double walled tanks
- corrosion proof tanks
- spill trays
- visual/audio alarms
- certified installers

Important Note:

Annually, the owner is responsible to ensure the system is maintained to code under National and Ontario regulations. It is important for your insurance coverage that this is done!

Oil/Water Separators

Oil Water Separators are used to remove waste oils that are collected in the drainage system. This improves the quality of the waste-water effluent. They are commonly used in industry, auto repair/recyclers, car-washes, and other businesses.

Oil/Water Separators are waste water treatment systems that require a Certificate of Approval (C of A) from the Ministry of Environment, Conservation and Parks. Contact the MOECP for review turn-around times to help you better plan your project.

Forestry

Managed Forest Tax Incentive Program

MFTIP is a voluntary program and in order to be eligible, landowners must own at least 4ha of forested property, excluding a 0.4ha area around the home. A Managed Forest Plan must be prepared and approved by a certified Managed Forest Plan Approver, and be committed to good forest stewardship.

Landowners in the program receive a 75% property tax reduction on the forested parts of their property.

To find an MNR Approved Managed Forest Plan Approvers near you:

Woodlot Operators & Logging Contractors

Managing your woodlot can provide both economic and ecological benefits. A properly managed woodlot can provide a reliable source of income for the farmstead, while improving air quality, water quality, and wildlife habitat. With careful management you can have a productive timber harvest and protect unique ecological features, such as individual rare tree specimens, prolific mast trees, wildlife den trees and hawk nesting trees.

Thinking about Harvesting your Woodlot?

In preparing to harvest your woodlot, consider the following plan of action:

1. Prepare a Woodlot Management Plan
2. Hire a certified tree marker
3. Get quotes from responsible loggers
4. Sign an agreement with the logger
5. Notify your local municipality
6. Enjoy the benefits and a healthy woodlot

Beware of high-grading, contractors that take all the best trees instead of doing selective, improvement harvesting. This practice damages the future value of your woodlot.

With careful management the economic and ecological value of your forest will continue to grow.

Is Your Plantation or Woodlot too Small to Attract a Logger?

Pine plantations where designed and planted with the intent that they should be thinned to promote regeneration of a wide diversity of tree species. Particularly shade tolerant species like sugar maple and beech, do well after thinning.

However, it can be a challenge to attract a logger if your woodlot is small. Consider

teaming up with nearby neighbours that also need an improvement cut.

FSC/Smartwood Certified Forest

The Forest Stewardship Council (FSC) oversees the development of regional forest management standards; offers resources and training around FSC certification; and raises awareness of FSC certification and the benefits of using FSC-certified products.

The FSC's ten Principles and Criteria for forest management define good forest management around the world. Regional standards are also developed to reflect local ecological, social and economic factors while adhering to FSC Principles and Criteria.

FSC Canada convenes representatives of all four Chambers (Aboriginal Peoples, Economic, Environmental, Social) to develop regional forest management standards that represent the ecology and social circumstances of a particular geographical area.

Got Pests? Common Pests of Trees in Ontario

About 10,000 identified species of insects and mites, and an equal number of diseases, attack woody plants in Ontario.

More than 90% of pests and diseases occur in limited numbers and do not threaten the health of plants.

Of those known to be potentially injurious to trees, many are transitory, occurring only infrequently in localized outbreaks of short duration.

For details, photos, treatments and other diagnostics visit:
mnr.gov.on.ca/en/Business/Forests/2ColumnSubPage/STEL02_167000.html

Emerald Ash Borer

The mortality rate from Emerald Ash Borer is nearly 100%. They've been found in Simcoe & Dufferin.

If you want to save your ash trees, act now before you see crown die-back. TreeAzin is injected by a licensed applicator into the tree on a 2 year cycle and provides protection from the insect.

Forests Ontario

Forests Ontario is a non-profit organization that supports large-scale tree planting programs on public and private lands in support of reaching the provincial goal of planting 50 million trees by 2025.

NVCA's forestry program is a partner with Forests Ontario, providing residents with planting services and information.

Visit Forests Ontario to learn more about their programs and services.

Fish & Wildlife

Banded Birds

Certain birds such as chickadees, finches, sparrows and jays have adapted to living in urban environments. How can you attract these birds to your yard? If you do not live near a large natural area, but would like to create a similar habitat for birds, there are many options. Birds, like us, need four basic elements: food, water, shelter and a place to raise young.

The best source of food for birds is a natural one. Although it is much easier to fill a bird feeder, planting flowers and shrubs that naturally produce bird food is a better long-term option for our feathered friends. Shrubs that produce berries and seeds are great for birds. Some shrub species that you may consider include; Black Elderberry, High bush Cranberry, Pussy Willow, Nannyberry, Serviceberry, Choke Berry, and Staghorn Sumac. Evergreen trees such as cedar and pine offer shelter to all types of birds from hummingbirds to great horned owls.

Fishing Licenses

If you are over 18 and under 65 years of age, you need a fishing license to fish in Ontario. You can purchase a license at any number of camps, outfitters and stores in Ontario.

Types of Licenses

Conservation licenses have lower limits on the number of fish you can catch per day than the regular license, but is cheaper. The regular license has increased limits on the number of fish you can take. Both types of licenses are restrained by size limits on certain species. All limits are per person.

Using a conservation license helps ensure that Canada's fantastic fishing continues to thrive.

Catch and Release Fishing

It is certainly a pleasure to see the smile on the face of an angler who has just caught a "big one" or watch one of their children hoist a "lunker" into the boat. To ensure that this smile will also grace the faces of your children and grandchildren, we suggest you put some of your catch back. Please remove the hooks carefully, handle the fish tenderly and, with satisfaction, return your fish to the water.

Barbless hooks facilitate easy removal and minimize the damage to the fish. Most

mortality among released fish occurs as a result of excessive bleeding when hooks have been embedded in the gullet or gills. Many of the fish hooked in these areas are released only to swim away and die. Safe removal of barbed hooks from such sensitive areas is difficult if not impossible. We recommend that the barbs on your hooks be filed off or pinched down with pliers, allowing safe and harmless removal of the hook.

Play it like a true sportsman. Carefully release the fish properly after the catch. Keep our waters a sportsman's paradise. And come back next year to enjoy the fishing.

"The future of fishing is in your hands."

Well and Septic

Wells and septic systems are listed together because the vast majority of well contamination by bacteria and nitrates is due to the homeowners own septic system. Protect your water, and learn to manage both your well and septic system.

Wells and septic systems are an integral part of a rural home's infrastructure. And unlike municipal systems, where you pay a team of experts to manage your drinking water and sewage treatment, the homeowner is responsible for the safe management of their well and septic system.

Well Water Testing

As a private well owner, it is your responsibility to test your own water. This is worthwhile; as research has shown that 30-50% of private wells have failed Ontario Drinking Water objectives. Failure was primarily due to bacteria and secondly because of nitrates. There is no way to know, but to test your water.

Testing Your Well Water

Remember to test your well water at least 3 times a year. It's important to test to see if your water is safe. Research has shown that 30-50% of private wells have failed Ontario Drinking Water objectives. Contaminants are generally not detectable by sight or taste. If you don't test, you won't know.

Regular well checks and maintenance will help keep your system running smoothly.

Wellwise, is a non-profit organization dedicated to helping well-owners test, manage, understand and protect their drinking water. They partnered with the Ontario Ground Water Association to provide reasonable, low-cost testing for general water

chemistry, bacteria, fuels & solvents, metals, minerals & salts, and pesticides.

All's Well that Ends Well

The Ontario Groundwater Association, which includes well drillers, engineers and scientists, estimates there are possibly half-a-million old wells in Ontario.

These old, unused wells are risky business.

Old wells pose an obvious safety risk. They also endanger the quality of groundwater. They provide a direct, unfiltered route for surface runoff, which often contains bacteria, nitrates, oils and other contaminants to enter the aquifer.

The MOECP legally requires abandoned wells to be decommissioned.

If you have old, unused wells – call a licenced contractor to have them properly decommissioned. Given that the nearest well to that unused-well is often your own, the water you protect might just be the water you drink every day.

Well Contractors

Well contractors should have valid provincial licenses. Make sure your contractor has theirs!

Groundwater and Well Types

Your well taps into one of nature's treasures – cool, clean groundwater. You and your family depend on this precious resource every day for cooking, washing, and continuous supply of safe drinking water.

There are three types of wells: Sand points, Dug/Bored Wells and Drilled Wells.

- Sand points generally have soft-water, but are the most prone to contamination because they are shallow and nearly impossible to seal properly.
- Dug wells are the next most prone to contamination, for similar reasons. Old dug wells may not have an annular seal, and could be lined with stone, brick or even wood.
- Drilled wells are typically more modern, deeper, well sealed and less prone to contamination.

Septic Contractors

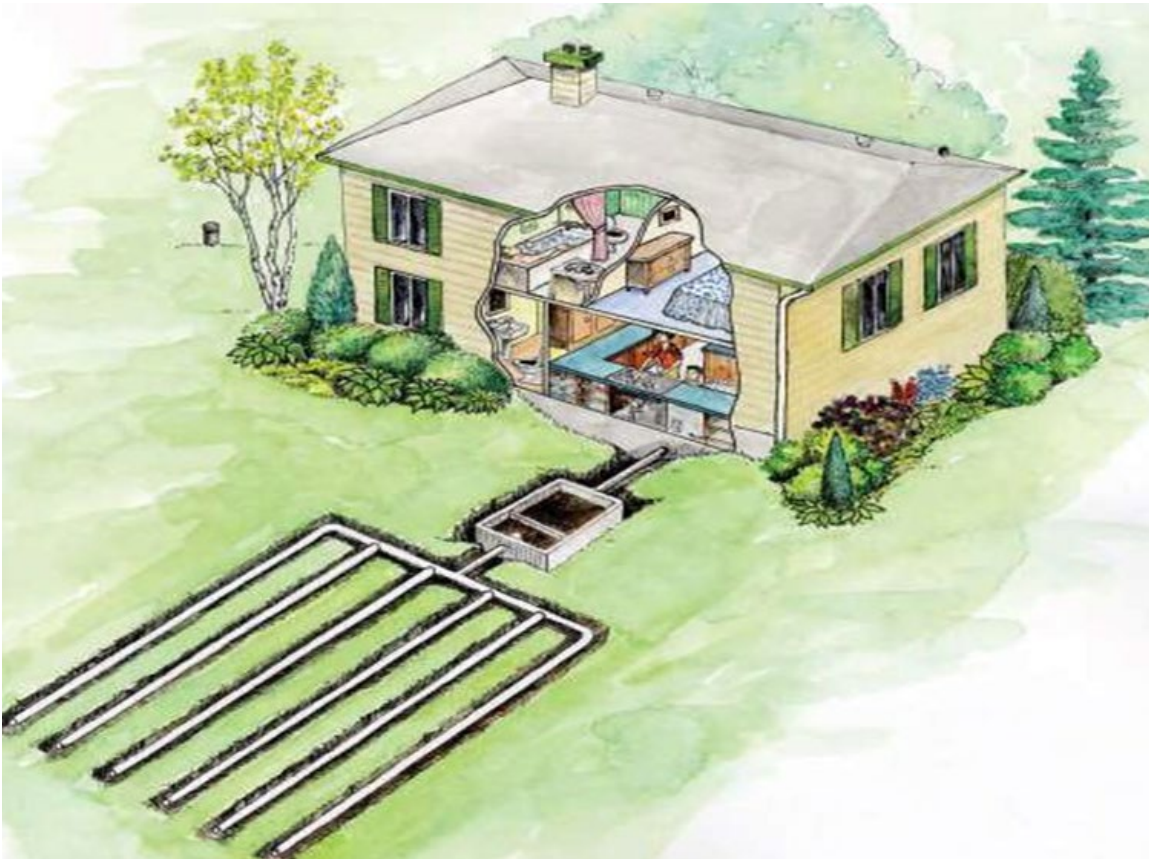

A septic system treats your sewage right in your own yard and releases the treated effluent back into the groundwater. Help protect your investment in your septic system, and keep your drinking water clean.

Failing septic systems pose a significant threat to groundwater quality. Would you want to drink what comes out of a failing septic system? A properly functioning system does a good job of cleaning the water, protecting human health and the environment.

Approximately a third of septic systems could be characterized as a public health nuisance. Contaminants do not stop at property lines and poor groundwater could cost the community significantly more. An Ontario study using tracer bacteria found that water can flow through soil cracks quickly; moving bacteria 100m or more from a septic system. Once in the groundwater, bacteria appear able to survive for months, even years.

A failed or poorly functioning system can be expensive for both you and the community. If your system fails, it could cost you up to \$5,000 to \$25,000 to replace it. Protect your investment.

Advanced Systems Update: Confirm with your contractor that your system meets national CAN/BNQ 3680-600 standards, required in Ontario as of January 1, 2017.

Septic Care Tips

1. Remember, your septic is a living system so don't throw harmful items down the drain. Solvents, oils, paint and pesticides can harm your septic. Grease, fats, newspaper, rags, coffee grounds, sanitary napkins, and cigarettes cannot decompose in the tank.
2. Don't use any chemicals that kill bacteria in your tank and bed; these reduce sewage treatment.
3. Inspect and pump tank out regularly. Avoid garbage disposals, they fill up your tank rapidly and could block your tile field causing your system to fail.
4. Protect your system from damage:
 - No vehicles or heavy equipment on septic tank or bed.
 - No excess water. Divert water from roofs, driveways, patios and sump pumps away from septic system.
 - No impermeable materials over your drain field (i.e. no decks or patios in that area).
 - No trees and shrubs near or on your drain field. Grass is the best cover for your system.
5. Add a riser to the access cover to help you easily locate and access your septic tank. These are now required for new systems under the building code.
6. Septic tank additives are unnecessary.

Be a Water Saver

Be water smart. The more water you use, the harder your septic system needs to work and the sooner it will need to be maintained.

The average Canadian uses approximately 335L of water a day. Over 26% of the water is flushed down the toilet and over 21% helps wash clothes.

Invest in a water-saving toilet (ultra-low-flush ones use as little as 3L), and front loading washers use 60% less energy and 40% less water than conventional top loading washers.

Signs of Septic Failure:

- Ponding water or damp spots, foul odours, or dark gray or black soils in your yard
- Water that rises to the surface during heavy rain or when water use is high (e.g. doing laundry)
- Toilets that flush slowly or drains that back up
- Bright lush growth in your lawn or the growth of wetland plants
- Old systems fail more frequently

Directory of Licensed Septic Contractors

For a list of contractors that are members of the Ontario Onsite Wastewater Association, follow this link:

Manufactures & Suppliers of Advanced Systems

Advanced wastewater systems provide much better treatment than conventional septic systems. Additionally, they come with annual inspections to insure they are operating as intended.

On properties with high water, poor soil or near bedrock a conventional septic system may not work as well as alternatives like Peat Filters, Aerobic Treatment systems or a Waterloo Biofilter.

The following list indicates manufacturers of advanced systems, which have a list of contractors licensed to install their systems.

BioNest

Low Impact Development

Greening your Grounds

TRCA stormwater management landscaping guide

Get ready to add some beautiful and innovative design elements to your yard! Rain barrels, rain gardens, permeable pavement and other stormwater management technologies help to conserve and clean the fresh water that lands on your property on rainy days.

To help homeowners make the most of rainwater, Toronto and Region Conservation Authority (TRCA) has created **Greening Your Grounds**, a 55-page step-by-step guide. It is distributed for free at our Greening Your Grounds workshops.

To find out about upcoming workshops near you, visit our [Calendar of Events](#).

Green Roofs

Green Roofs for Healthy Cities

Green Pages Industry Directory

(not the NVCA you're reading now – great minds think alike ☺)

<https://greenroofs.org/green-pages-industry-directory>

Native Plant Nurseries, Plants & Information

Native plants are beautiful and can be used in all landscapes and gardens, from restoring a forest, to creating a prairie or meadow, to planting flower beds, or selecting a tree for your front yard. Native plants are adapted to local conditions and are an integral part of a healthy, natural environment. Find a plant nursery near you that specializes in native plants!

Creating a Native Plant Garden

1. Contact your local conservation authority, native plant nursery, naturalist group, etc – for advice, ideas and resource materials.
2. Assess your site: Sun? Soil? Drainage?
3. Plan your garden, giving thought to size, location, and staging (if planning a large garden, you may want to stage the installation over a number of years. Also consider a propagation bed to reduce cost.)
4. Plant selection
 - a. Site conditions
 - b. Growth form
 - c. Height
 - d. Benefit to Wildlife and Pollinators
5. Prepare the site – there are options:
 - a. Solarize: (cover area with black/clear plastic for a summer season. Helps remove weed seeds).
 - b. Layer garden or Lasagna Garden: Cover area with cardboard or 10 sheets of newspaper. Add 12 inches of soil or compost. Add 6 inches of mulch.
 - c. De-sod: (rent a machine)
 - d. Till: May want to till twice to allow the weed seeds to germinate and be tilled under
6. Seed or plant
 - a. Spring and Fall are the best times to plant
 - b. Groups plants in odd numbers (3, 5, 7...)
 - c. Large meadow/prairie sites may benefit from a cover crop of annual rye, Canada wild rye or riverbank rye
7. Maintain
 - a. Water deeply, once a week during 1st year (one inch per week)
 - b. Weed and mulch unwanted species
8. Enjoy!

Native Trees and Shrubs for Every Site

- **Well drained:** Water drains rapidly from the site, seldom pools even after a heavy rain. Moderately drained: Water may pool but only briefly.
- **Imperfectly drained:** Water sometimes pools on the site for extended periods.
- **Poorly drained:** Water drains slowly from the site all year long and the soils may appear wet just below the surface.

Butterfly and Pollinator Gardens

Healthy populations of pollinators are needed to ensure good fruit and seed set. Everything from apples to zucchinis depends on them. It's important to the gardener and the farmer. Crop research on crops such as canola and watermelon show that setting aside a portion of each hectare can improve net profitability.

Beyond honeybees and bumblebees, there are many other pollinator species, including many butterflies, moths, hummingbirds, wasps, flies and beetles. Ontario has over 400 species of wild bees! Unfortunately, the small, solitary wild bees are more vulnerable to extinction than most insects.

There are three secrets to creating your own pollinator haven - habitat, food and water and you'll attract many beneficial insects.

Creating pollinator habitat can be as simple as leaving some areas undisturbed in your garden or farm. They also like sheltered areas, so add windbreaks and hedgerows. Butterfly houses consist of a small box with narrow slots, and can provide much needed shelter. Many native solitary bees nest in loose sandy soils or in the hollows of twigs, stems and logs. Artificial sand mounds, covered nesting tubes or drilling a series of small holes into a dead log can attract solitary bees to nest.

Solitary Bee House

Food, nectar and pollen, need to be available from early spring to late fall. A diversity of wildflowers and flowering shrubs provides a rich diet to help pollinators get a balanced diet. Rich biodiversity also protects against the failure of any one species having a poor year. To attract butterflies, plant the host plant for the caterpillars to munch on. For example, Monarchs larvae need milkweeds, Buckeye's blue vervain, Fritillaries' violets, and the delicate Spring Azure's dogwoods and sumacs. Though not as popular as bird feeders, butterfly feeders can give you a great, close-up glimpse of many local species (as well as a good use for over-ripe bananas and other fruit).

In their larval stage, butterflies require very specific host plants on which to feed. The monarch butterfly caterpillar, feeds only the milkweed plants (*Asclepiadaceae spp.*), like common milkweed, butterfly weed and swamp milkweed. Don't worry if butterfly caterpillars are munching on the leaves. Remember, this is their food.

Larval Host Plants to Support Butterfly Species

Hackberry (*Celtis* spp.)

Attracts: American Snout, Question Mark, Mourning Cloak, Hackberry Emperor Tawny Emperor

Turtlehead (*Chelone glabra*)

Attracts: Baltimore checkerspot

Poplar & Aspen (*Populus* spp.)

Attracts: mourning cloak, White admiral, Compton Tortoiseshell, Viceroy, Dreamy duskywing

Spice bush (*Lindera benzoin*)

Attracts: spice-bush swallowtail, Prometha moth

Showy tick trefoil (*Desmodium canadense*)

Attracts: eastern tailed blue, hoary edge, silver spotted skipper, wild indigo duskywing

New Jersey tea (*Ceanothus americanus*)

Attracts: spring azure, mottled duskywing

Violet (*Viola* spp.)

Attracts: fritillaries

Blue vervain (*Verbena hastate*)

Attracts: buckeye

Elm (*Ulmus* spp.)

Attracts: Mourning cloak, Question mark, Eastern comma

Willow (*Salix* spp.)

Attracts: mourning cloak

Viburnum (*Viburnum* spp.)

Attracts: Spring azure

Dogwood (*Cornus* spp.)

Attracts: spring azure

Aster (*Aster* spp.)

Attracts: Pearl crescent, Silvery checkerspot, Harris checkerspot

Wild lupine (*Lupinus perennis*)

Attracts: Karner blue, frosted elfin, Silvery Blue, Persius Duskywing

Milkweed (*Asclepias* spp.)

Attracts: monarch

Meadowsweet (*Spirea* spp.)

Attracts: Eastern Tailed Blue

Sumac (*Rhus* spp.)

Attracts: Spring azure

Nectar Rich Pollinator Plants

Bergamot, *Monarda fistulosa*

Flowers: July to August

Height: 90-120 cm

Drainage: Dry to Moist -- Full sun

Blazing star, *Liatris* spp.

Flowers: July to August

Height: 30-150 cm

Drainage: Dry to Moist -- Full sun

**New England aster
*Aster novae-angliae***

Flowers: July to Frost

Height: 120-150 cm

Drainage: Moist

Full sun to light shade

**Joe-pye weed
*Eupatorium maculatum***

Flowers: July to August

Height: 120-180 cm

Drainage: Moist to Wet -- Full sun

**Lance-leaved coreopsis
*Coreopsis lanceolata***

Flowers: July - Sept

Height: 30-60 cm

Drainage: Dry to Moist -- Full sun

**Butterfly weed
*Asclepias tuberosa***

Flowers: July to Sept

Height: 30-90 cm

Drainage: Dry (sandy) -- Full sun

Stiff goldenrod, *Solidago rigida*

Flowers: July - Sept

Height: 30-120 cm

Drainage: Dry to Wet -- Full sun

**Black-eyed Susan
*Rudbeckia hirta***

Flowers: June to Frost

Height: 60-90 cm

Drainage: Dry to Moist

Full sun to light shade

Turtlehead, *Chelone glabra*

Flowers: August - Oct

Height: 30-90 cm

Drainage: Moist

Full sun to part shade

**Cup plant
*Silphium perfoliatum***

Flowers: July to Oct

Height: 120-240 cm

Drainage: Dry to Moist

Full sun

Wild lupine, *Lupinus perennis*

Flowers: May - July

Height: 30-60 cm

Drainage: Dry (sandy preferred)

Full sun to part shade

**Swamp milkweed
*Asclepias incarnate***

Flowers: June - August

Height: 100-120 cm

Drainage: Moist to Wet

Full sun

**Ox-eye
*Helianthus helianthoides***

Flowers: July to Sept

Height: 90-150 cm

Drainage: Moist -- Full sun

**Grey-headed coneflower
*Ratibida pinnata***

Flowers: June - August

Height: 90-150 cm

Drainage: Dry to Moist -- Full sun

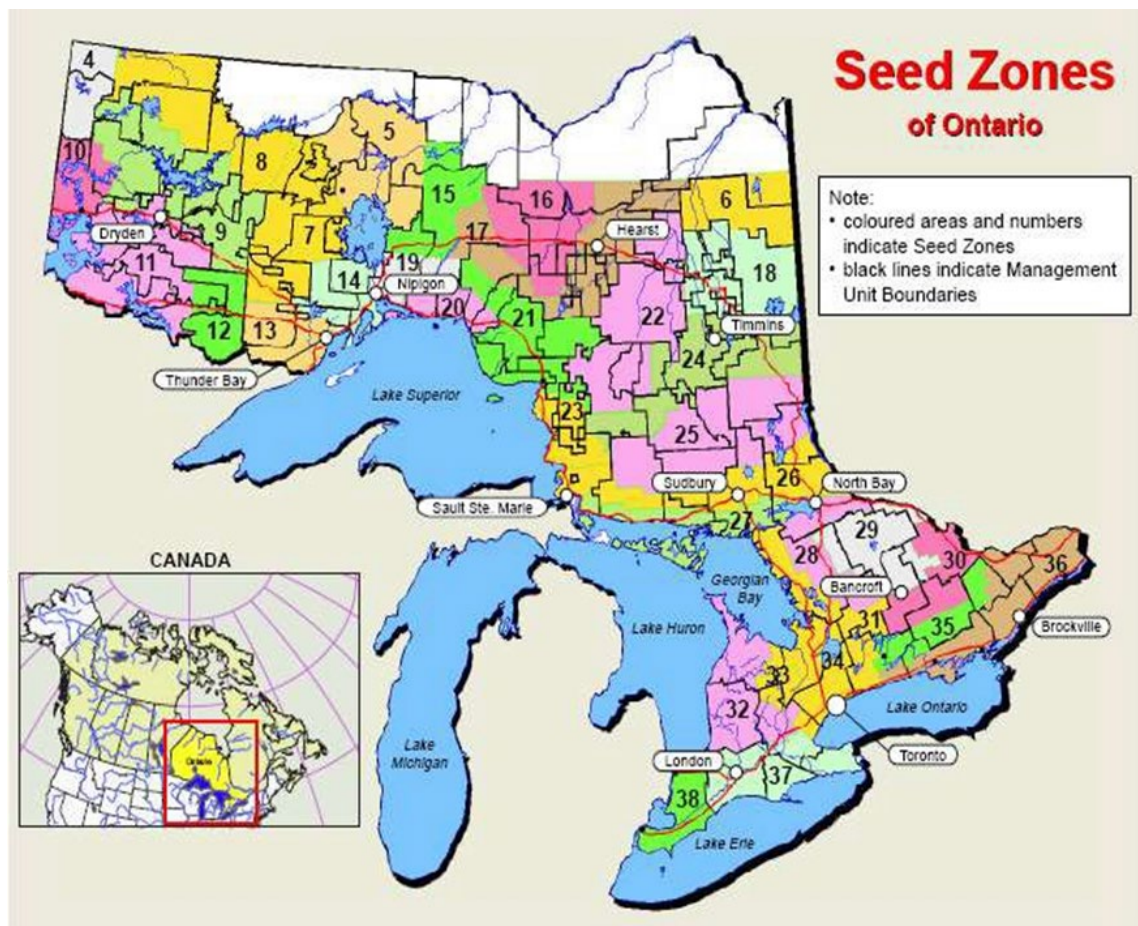

Native Plant Seed Zones

Native plants are plants that evolved within a specific area and are adapted to the climate and conditions found in the area. This means that if the region has really hot and dry summers, or long and cold winters, the native plants will be able to survive. However, during European colonization of North America a flood of new introduced species began arriving. Some plants were brought over intentionally, but many hitchhiked to the New World. This green colonization continues today.

Native wildflowers are hardy, beautiful and can provide great seeds and nectar sources for birds and butterflies. Hardy, native plants to try include Giant sunflower, Sweet-ox-eye and Black Eyed Susan and grasses such as Big Bluestem and Indian grass are all excellent seed sources for backyard birds.

Ethical nurseries collect seed or cuttings, and do not harvest plant from the wild.

Plants from within your seed-zone are better adapted to the local climate and local diseases and insects. The Nottawasaga Valley is seed zone 33 along the Niagara Escarpment, and 34 in the rest of the valley.

Native Plant Nurseries, Seeds and Information Sources

Where known, products and services offered are indicated by shaded cells. Some growers require an appointment.

Forest Invaders - A Threat to Your Woodlot

As an alien, invasive plants are from another region and often escape garden/domestic use. They then reproduce so aggressively that it outcompetes native plant communities. Invasive plant can be trees, shrubs, or herbaceous plants. Alien invasive plant species have the potential to displace natural vegetation such as woodland trilliums or the natural regeneration of forest tree species.

Approximately 700 species (27% of the total flora!) growing in Ontario are non-native. Many imported plants are unable to reproduce or survive without help. Unfortunately, some alien invasive plants can successfully compete and dominate in certain native habitats. In the plant's original native habitat, natural controls such as climate, animals, insects, fungi, and other plants restrict them to a certain habitat niche within their range. But, no natural control exists here.

Be wary of purchasing specimens from nurseries that are advertised as suited to our climate range and 'easy to grow'. Visit the **Ontario Invasive Plant Council** to find out what's invasive, and for ideas of less invasive and native species to grow instead (see the "Grow me Instead" booklet!)

ontarioinvasiveplants.ca

Four particularly persistent alien invasive plant species in Ontario's natural areas:

Dog Strangling Vine

(Vincetoxicum nigrum and V. rossicum)

Vine
Woodlands/edges/ravines
Skinny seed-pod
Small dark-purple flowers
Opposite, smooth- edged leaves

Garlic Mustard

(Alliaria petiolata)

Biannual
Woodlands/edges
Garlic scented
Cluster of small, white 4-
petaled flowers
Green leaf-rossette present
in spring before other
native plants

Common Buckthorn

(Rhamnus cathartica and R. frangula)

Shrub
Woodlands/edges
Bitter, dark blue berries
Small thorns
Strong venation
Green late into fall

Norway Maple

(Acer platanoides)

Woodlands
Milky sap
Flat keys
Green late into fall
Often gets blackspots on
leaves

Invasive Species Control

Invasive species control may involve mechanical (cutting, pulling, etc.), physical (solarizing, smothering, barriers, etc), biological or chemical. Controlling each invasive species effectively may require a mix of control techniques. Pesticides and herbicides controls require a licensed applicator.

Controlling Invasives: Learn & Avoid

Learn about invasive species so you don't accidentally buy and plant them. Many of these species are still sold in garden centres.

- NVCA's Invasive Species page for identification and control options for the top 12 most invasive plant species.
- Ontario's Invading Species Awareness Program
- Ontario Invasive Plant Council

Grow Me Instead Garden Guides

Better, beautiful options native and non-invasive introduced plants for your garden. This is particularly important if you live on the edge of a natural area – woodland, wetland, stream or meadow.

- Grow me Instead Guides:
ontarioinvasiveplants.ca/resources/grow-me-instead/

Report

Get involved in citizen science, and help map the spread of invasives. Please report the sightings to EDDmapS Ontario

Tax Incentive Programs

Managed Forest Tax Incentive Program

Landowners who apply and qualify for the program have their property classified and assessed as managed forest and are receive a 75% on the forested portion of their property.

MFTIP is a voluntary program and in order to be eligible, landowners must own at least 4 hectares of forested property, must prepare a Managed Forest Plan and have it approved by a certified Managed Forest Plan Approver, and commit to good forest stewardship.

Ministry of Natural Resources and Forestry (Ontario Forests)

Managed Forest Tax Incentive Program

NVCA does not endorse or recommend the services or contractors listed.

It is provided for your convenience, to simplify finding the appropriate group or business.

Use a licensed contractor and due diligence if retaining a contractor.

Conservation Land Tax Incentive Program

Lands identified by the Ministry of Natural Resources as Provincially Significant are eligible for this program. The area must be >1/5 ha (1/2ac).

The CLTIP does not provide tax relief for buildings or other improvements and associated land (each building improvement removes 2/5 hectares or 1 acre from eligibility).

The eligible types are:

- Provincially significant wetland;
- Provincially significant area of natural and scientific interest (ANSI);
- Habitat of endangered species;
- Land designated as escarpment natural area in the Niagara Escarpment Plan;
- Community conservation lands

Contact: Ministry of Natural Resources and Forestry at 1-800-268-8959

Energy

Energy Auditors

Today, 17% of all energy used in Canada goes toward running our homes. Every time we use energy from fossil fuels such as coal, oil and gas, we produce greenhouse gas emissions.

By using less energy in our homes, we help reduce the production of the greenhouse gas emissions that contribute to climate change and harm our environment.

Below are organizations that can help you with advice and finding a licensed energy auditor.

Renewable Energy

Currently the provincial Government offers incentives for homeowners to incorporate renewable energy into their home.

Homeowners that have either solar or wind are eligible to enter a Net Metering agreement between. The electricity you produce, but don't use, is sent to the distribution system in return for a credit towards your future energy costs. Through some programs, like Microfit, homeowners can sell the electricity directly back to the grid.

Hazardous Waste

Household Hazardous Waste

Take household hazardous wastes to your municipal hazardous waste facility.

Common household hazardous wastes include:

- Paint & Solvents
- Grease
- Pesticides & Fertilizers
- Thinners
- Nail polish remover
- Kerosene and propane
- Antifreeze
- Gas and oils
- Batteries

The sink, toilet, storm drains, roadside ditches and regular garbage are not the place for household hazardous waste. If you pour these wastes drains or into toilets, they can seep into groundwater. They may ruin your septic system. Sewage treatment plants, septic systems and regular landfills are ill equipped to handle household hazardous wastes. Proper hazardous waste disposal is critical so that these chemicals are treated and contained.

Use drop cloths or tarps when working with hazardous materials such as paints, driveway sealers or wood stain to prevent spills from leaking into the ground. If a spill occurs, clean it up absorbent material such as kitty litter or sawdust and scoop the contaminant into a container.

Canadian households generate more than 60,000 tonnes of hazardous wastes annually!

Every year, streams and groundwater are polluted by improperly stored and disposed of household hazardous chemicals such as used motor oil, left over paint, batteries, solvents,

garden chemicals, heavy metals and other contaminants.

What can you do?

The County of Simcoe has three Household Hazardous Waste (HHW) depots to provide households with free environmentally safe disposal for unwanted paints, automotive fluids, pharmaceuticals and other potentially dangerous household materials. These facilities are open on specified Saturdays in April, May, June, September and October.

For information on how to responsibly dispose of your left over paints, batteries, garden chemicals and cleaning products, call your municipality:

Organic Lawn Companies

Grass is drought tolerant and will recover after dry summer periods.

Consider reducing your lawn area and xeriscaping. Xeriscaping uses attractive drought- tolerant plants and mulches. It uses little or no extra water.

Testing your soil is an important for the success of your property's landscape, including your lawn, as anything you can do. Just as a blood test indicates your deficiencies a soil sample can do the same thing for your lawn.

Organic Means...

- No pesticides to contaminate our soil and water or injure workers!
- No chemical fertilizer runoff to contaminate our rivers, lakes, oceans and drinking water!
- No chemical pesticides or weed killers; instead, use mechanical or thermal weeding techniques and organic methods in order to protect crops;
- No synthetic fertilizer or scrubbing sludge; instead, reinforce the soil by using proven agriculture methods such as crop rotation, application of natural manure and spreading of composted organic material;
- No seeds originating from GMO's; instead, use only original seeds;
- For animal breeding:
 - No antibiotics or growth hormones; instead, use alternative therapeutic techniques such as homeopathy;
 - No animal flours in food diets; instead, use feed (fodder, for example) that is cultivated according to organic standards and without GMO's;
 - No overpopulation of animals in closed buildings; instead, provide decent

living conditions having adequate moving space, sunlight and fresh air.

- For processed food products:
 - No chemical dyes, artificial flavours or additives resulting from synthesis, thus preserving the original taste;
 - No preservatives;
 - No irradiation;
- A healthier and more sustainable environment for us all!
